

Independent - Fast Reaction - Flexible - Adaptable

NEW

We are pleased to announce the latest development from **JUWEL**: The interchangeable square drive insert for our torque wrenches.

Customer focus and ensuring the greatest possible independence of our partners have characterised our actions for decades. This is why all torque wrenches in our portfolio can now be ordered with interchangeable square drive:

- Adaptations of supports due to adapters and the associated change in the body dimension are no longer necessary
- If the drive square is damaged due to incorrect support, material fatigue or overload, the device no longer needs to be sent out for repair: Replace the defective square drive yourself on site and get on with the job - save costs for transport, downtime or spare parts.
- Can be combined with all torque wrench drive types: battery, electric, pneumatic or mechanical
